EFFICIENT PROCESS

1. YOU WANT SOMEONE TO IMPLEMENT YOUR IDEA

You found my profile and decided to work with me

After you decided to work with me, we are starting a discussion about the project. We are talking about the requirements, conditions, time and pricing.

2. SIGN A CONTRACT AND ORGANIZE

We sign a virtual contract

You can work with me remotely or request me on site. After we are sure about everything we sign a contract and start working.

3. IDEA IMPLEMENTATION

The next step is the software development

Now I know what should I do and how I will work, so it's my time to write the code and develop your application, to make your idea a reality.

4. DELIVERY AND TESTING

It's time to deliver the code and test everything

Software development phase finished and the code is ready to be delivered. I can test the application and deploy it where it needs.

5. FEEDBACK AND SUPPORT

Completed! The app/website is working now!

After I finished my work you can leave me a feedback and we can stay in touch if you need a support about the application some day.
